Control Valve Products for HVAC/BAC

Specifying and buying a control valve begins with an understanding of the control and piping systems to which it will be connected. The Warren Controls staff has attempted to make the ordering process "user friendly" by placing products into well-defined categories and tabulating information like pipe size, body and trim materials, and flow capacity factors (Cv), followed by an assortment of actuators ... a lot of information, in a logical format, intended to make your work as easy as possible.

SELECTING A CONTROL VALVE

► An introduction to control valve selection

Warren Controls offers control valve configurations to meet the needs of nearly any building automation control system. A configuration is a valve body assembly, complete with an actuator that can open and close the valve, or modulate the valve plug to control flow. Stem operating forces are dependent upon packing friction, the size of the seat opening, or area of imbalance, and the differential pressure against which the valve must operate or close. For each configuration, the tables include information about capacity (Cv), materials of construction, body end connections and shut-off capability (differential pressure). Actuator selections include a variety of electric operators. Each configuration is identified by a valve body code plus an actuator code. Contact us if you need to explore additional possibilities.

Fluid flow into, or through a load can be controlled in two ways. The first is by installing a two-way valve inline (in series) with the load; the second is by using a three-way valve to bypass part, or all of the flow around the load.

► **TWO-WAY VALVES** are available in three styles: single seat (unbalanced), single-seat cylinder balanced, and double-seat. Single-seat (unbalanced) and single-seat cylinder balanced valves have a single plug and one seat opening. Double-seat valves have a dual plug, and two seat openings for parallel flow inside the body. Each style has specific advantages. The single-seat (unbalanced) valve, having one seat opening with a single unbalanced moveable plug, is capable of tight shut-off. A disadvantage is that large valves, or valves closing against high differential pressures, require large powerful actuators. Warren single-seat (unbalanced) valves 1/2 through 2 inch are rated to Class IV (.01% of full Cv) in accordance with ANSI B16.104 (1976), and 2-1/2 inch and up are rated to Class III (0.1% of full Cv) seat closure. The single-seat cylinder balanced valve, having one seat opening with a single balanced moveable plug, is also capable of tight shut-off. An advantage is that the balanced plug design allows for smaller less powerful actuators to be used. Warren single-seat cylinder balanced valves are rated to Class III (0.1% of full Cv) seat closure. All Warren single-seat valves, both unbalanced and cylinder balanced, are capable of seat closure in accordance with ANSI B16.104 (1976) Class IV (.01% of full Cv) depending upon the force available from the actuator. If Class IV seat closure is important to your application, please bring it to the attention of the sales person.

► **DOUBLE-SEAT BALANCED VALVES** direct flow upward through one seat and downward through the other, so differential pressure produces an upward force on one plug, and a downward force on the other. Since both plugs are on a common shaft, the two forces oppose each other and the actuator only has to overcome the difference between the two. Large, double-seat valves can be operated by relatively small, inexpensive actuators. A disadvantage is that seat closure is limited to ANSI B16.104 (1976) CLASS III (0.1% of full Cv), depending upon how much force is available from the actuator. All of these factors were considered in preparing catalog tables, and the differential pressure against which a selected valve can close appears on the same line with the valve/actuator configuration codes.

► **THREE-WAY VALVES** for bypass control are available in two styles. Diverting valves are installed in the load device's inlet piping, and direct flow either through, or around the load. This is sometimes referred to as "diverging" control. Warren Controls diverting valves use cylindrical plugs, which are relatively insensitive to differential pressure, so actuators tend to be smaller than those on mixing valves of similar sizes.

Of the 3-way valves Warren Controls offers, the diverting is a bit more costly design than the mixing style and does not offer fine modulating control at extreme ends of stroke like a mixing valve can achieve. Further, the diverting style is limited to 50 PSI differential pressure and can only achieve ANSI Class II leakage (0.5% of full rated flow). For these reasons, unless it is predetermined via piping that the bypass application take place on the inlet side of the load, the 3-way mixing valve is always the better choice for bypass

► **MIXING VALVES** are installed in the load device's outlet piping, and accept flow either from the load, and/or from the bypass line, combining the two flowing streams in their discharge piping. They can also be used to mix fluids coming from separate sources, such as adding cool water to temper a hot water stream. These valves are recommended for modulating control, and can achieve seat closure similar to a single-seat valve against either inlet stream.

When the calculated valve size is smaller than the system pipe size, pipe reducers can be used. If the difference is more than two pipe sizes, control will be improved by locating the reducer at least ten (10) of the smaller pipe diameters away from the valve inlet, in a straight run of pipe. This allows induced turbulence to subside before the fluid enters the control valve.

The inherent (constant pressure) flow characteristics of these globe valves are determined by the machined shapes of their plugs. Equal percentage trim, most frequently specified for control valves, has several advantages over other trim styles. Flow area increases slowly as the plug begins to move out of the seat, and the rate of increase gets larger as movement continues. At low flow rates, change occurs slowly, adding stability to the control scheme. Much larger incremental increases in flow area, beyond the 50% point in stem travel, can help to compensate for typical decreases in available pumping pressure, and increased piping and heat exchanger friction losses at higher flow rates.

The widely acclaimed ValveWorks® sizing and selection software can be used to determine correct Cv, actuator size and to ensure special conditions such as cavitation, flashing and choked flow are known about, with the ability to 'tune' your application to make these conditions disappear. Refer to the Warren Controls website www.warrencontrols.com to receive your free copy. Alternately for the less adventurous, contact your local representative and they will be glad to manage your application for you inside ValveWorks®, providing comprehensive performance reports for up to four process conditions, full construction details and flow curves for each valve of your project. Over 90% of all problems related to control valves after commissioning are generally related to issues that could have been identified and resolved with a program like ValveWorks®!

CONTROL VALVE DETAILS

CONTROL VALVE APPLICATION:

The Warren Controls HVAC / BAC Series modulating globe style control valves provide excellent throttling characteristics and typically have an ideal installed rangeability of 50:1 with the range of pneumatic and electric actuators that we offer. We recommend accurate sizing and selection through the use of ValveWorks® for the best results or alternately through the MAX capacity flow tables on pages 6-7 to gain an assessment on maximum capacity when a valve is 100% open.

In this market segment, the Warren Controls brand and HVAC / BAC series has been widely recognized for many years now as the premier brand of control valves with its heavy duty construction and robust actuation offering many years of problem free operation. Most of the applications in this market require very slow and infrequent but precise movements from the actuator. Warren Controls offers a wide range of quality, long-life actuators to choose from with these characteristics in mind.

The electric actuators have up to 300 parts of resolution of movement with respect to the control signal. However, the electric actuators operate at relatively slow speeds, usually in the range of 40 to 120 seconds to fully stroke the valve, making them well suited to the applications in this market. Further there are choices to make for fail mode and close off force.

CONTROL VALVE PACKING:

Warren Controls offers two types of packing glands around the valve stems of the HVAC - BAC series control valves.

EPDM LIP PACKING (STANDARD):

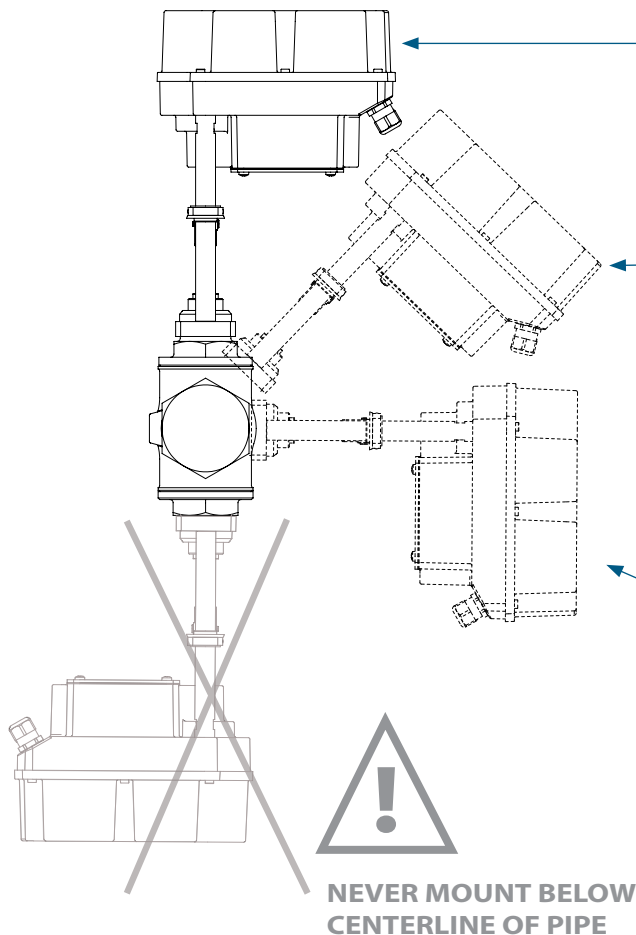

This proven design is particularly well suited to common water and water/glycol and low pressure steam applications common in HVAC and Building Automation Controls. This ethylene propylene compound is suitable for water or water glycol applications from 32°F to 350°F. Many chiller applications are driving temperatures even lower approaching the lower limits for Teflon V-Rings. Also, heated water systems are frequently improperly filtered for dissolved solids. In such systems mineral deposits tend to form on valve stems. Teflon V-Rings over time are no match for the abrasive action of the deposits on a sliding valve stem. The EPDM Lip packing has a higher surface contact area and does a better job keeping the stem clean in these dissolved solid fluids.

TEFLON V-RING (OPTIONAL):

This proven design has been a Warren Controls standard for many years and is generally impervious to a wide range of process fluids from 40°F to 400°F. The v-rings do an excellent job of providing a solid seal while allowing for low stem friction. The packing set includes a stainless steel spring for a preset load on the packing gland. This packing arrangement is self-adjusting.

For the best possible packing life in Water Applications follow the Warren Controls Water Quality Guidelines.

► Control Valve Orientation

VERTICAL ABOVE PIPING

This is the recommended position for mounting as it is the best position to ensure the service life of the equipment; however this is where it will encounter the most heat and sound vibrations.

45° FROM VERTICAL ABOVE PIPING ON EITHER SIDE

You may mount in this position to try to reduce the heat in high temperature applications; however this will reduce the life of the packing.

90° TO PIPING HORIZONTAL ON EITHER SIDE

This orientation provides the best temperature relief w/ higher fluid temperatures but places the greatest strain on the valve packing, reducing packing life.

WATER QUALITY GUIDELINES

FLUID QUALITY AND SERVICE LIFE GUIDE LINES

The purpose of these guidelines is to avoid valve and water systems problems caused by poor water quality in HVAC systems. While all cooling and heating systems are susceptible to problems, closed chilled water systems, including those containing brine or glycol, are especially prone to system and valve problems. To achieve the satisfactory operation and maximum life of your Warren Controls valve, it is important that the following recommendations are adhered to and that a water treatment, filtration and control specialist be consulted before the system start-up.

WATER QUALITY RECOMMENDED PARAMETERS

Chilled Water, Closed Loops, and Hot Water Systems up to 212°F (100°C).					
	8.0	<	pH	<	10.3
			Conductivity	<	3000 MMHS
			Iron	<	0.5 ppm
			Cooper	<	.05 ppm
<i>Chilled Systems</i>	→ 100 ppm	<	Molybdenum (Mild Steel Corrosion Inhibitor)	<	150 ppm
<i>Hot Systems</i>	→ 200 ppm	<	Molybdenum (Mild Steel Corrosion Inhibitor)	<	250 ppm
	400 ppm	<	Nitrite (Mild Steel Corrosion Inhibitor)	<	1000 ppm
			Azole (Yellow Metal Inhibitor)	>	5 ppm free and available
			Bacteria	<	1000 cells/ml (when system is cool)

Water hardness should be less than 100 ppm of hard water ions (Ca++, Mg++), where 17.1 ppm = 1 Grain Hardness. Additionally, levels of chloride and sulfate should remain less than 25 ppm. When water hardness is at unacceptable levels, a water softener expert should be consulted.

WATER AND GLYCOL SOLUTIONS

The commonly used heat transfer glycol fluids are, either ethylene glycol or propylene glycol. Glycol concentrations of <25% often do not provide sufficient corrosion inhibiting properties and at levels <20% can actually provide a food source for bacteria. As bacteria consume the food and die off, a highly acidic condition can result. The recommended concentration for popular glycol based solutions is 25% to 60%.

CAUTION

- 1 The use of hydrazine can result in the formation of ammonia and must be controlled to prevent stress corrosion and embrittlement, which can lead to fracture of some brass alloys.
- 2 If there is a known, or suspected, presence of oil in the water in a system it is highly recommended to use valves with stainless steel trim. Valves with stainless steel trim contains Teflon packing and Fluoraz seals that should not be affected by the presence of oil. Valves with bronze trim contain ethylene propylene packing and seals that could swell in the presence of oil and cause valve sticking problems.
- 3 Systems should be designed using common, standard, good practices as outlined by ASME. Caution should be taken as to turbulence in flow caused by the elbows or other equipment as this can affect performance.
- 4 Valves are to be installed by skilled personnel and in strict accordance with the installation instructions and local regulations.
- 5 Observe all safety practices when working with systems. Never service a valve in use.

Valve Capacities are Valid for Line Sized Applications

FLOW PATHS EXPLAINED

► How Each Valve Type Works

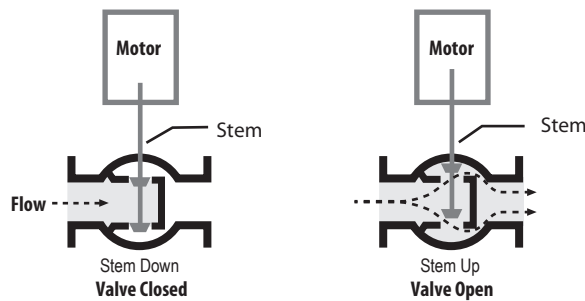

TYPE 20 *Single-Seated Valves*

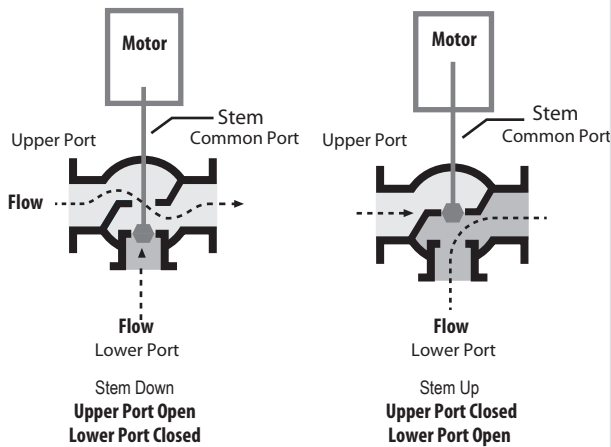

TYPE 23 *Single-Seated Cylinder Balanced Valves*

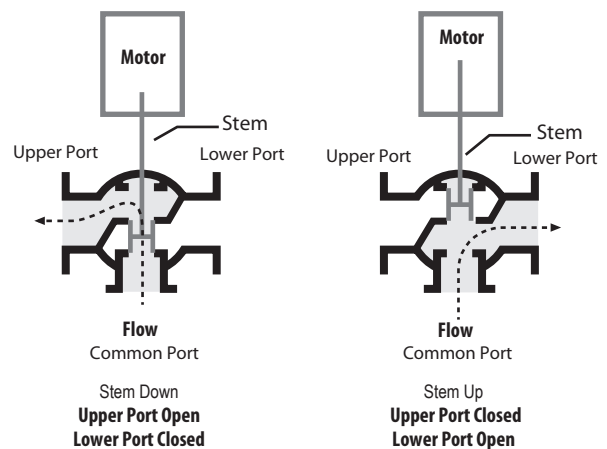

TYPE 22 *Double-Seated Valves*

TYPE 30 *3-Way Mixing Valves*

TYPE 32 *3-Way Diverting Valves*

► IDENTIFYING A CONTROL VALVE CONFIGURATION

A **CONFIGURATION** is a control valve formed by the combination of a valve and actuator. Configurations are tabulated by valve capacity (Cv), pipe size, end connection, trim material, actuator size, control characteristic, and shut-off capability (differential pressure). To order a control valve configuration, locate the line that best meets your application, and specify the appropriate valve code and actuator code. See the example on this page.

Fail Last Position

Cv	Size (IN)	Thd NPT	Trim	Valve Code	SHUT-OFF (PSID)		Max Timing (SEC)
					CL III	CL IV	
4.9	0.5	250	S/S	VA2004AC	400	400	90

E024

VA2005AC-E024

Identifies an ANSI 250, NPT threaded bronze valve body assembly with stainless steel trim and a flow capacity rating (Cv) of 7.2. With Electric Actuator Fail Last Position.

Note: You may also specify on an order available control signals and/or control actions other than the factory settings.

► DETERMINING BODY MATERIAL CONFIGURATION

Matching the valve's body material and end connection to existing piping or specifications is the best choice. Otherwise, to determine what body material and end connection you need, you must first know the pressure and temperature of the medium entering your valve. For most flowing media you will need an approximate idea of the temperature. For saturated steam you can use the steam table below to determine the temperature. Once you know the pressure and temperature, you can use the body pressure-temperature rating table, (below, to determine what body material and end connection you need.

EXAMPLE 1: You need a 2-1/2 inch single-seated valve. You have saturated steam entering your valve at 50 PSIG. From the steam table you see the steam has a temperature of 297.7°F. From the valve configuration sheets you know that a 2-1/2 inch single-seated valve is available with an iron body with a 125 flange or an iron body with a 250 flange. Scanning the pressure-temperature rating table, you see that the pressure rating for an iron body with a 125 flange at 297.7°F is not listed but a pressure rating is listed at 300°F. At 300°F the pressure rating is 140 PSIG. Since 300°F exceeds the actual temperature of 297.7°F and the 125 PSIG rating at 300°F exceeds the actual pressure of 50 PSIG, an iron body with a 125 flange is ok.

EXAMPLE 2: You need a 6 inch double-seated valve. You have 200 PSIG water entering your valve at 175°F. From the valve configuration sheets you know that a 6 inch double seated valve is available with an iron body with a 125 flange or an iron body with a 250 flange. Scanning the pressure-temperature rating table, you see that the pressure rating for an iron body with a 125 flange at 175°F is 170 PSIG. Since this pressure rating is less than the actual pressure of 200 PSIG, an iron body with a 125 flange is not ok. Scanning the pressure-temperature rating table again, you see that the pressure rating for an iron body with a 250 flange at 175°F is 385 PSIG. Since this 385 PSIG rating is greater than the actual pressure of 200 PSIG, an iron body with a 250 flange is ok.

ELECTRICALLY ACTUATED

SINGLE SEATED BRONZE AND STAINLESS STEEL- 1/2" - 2"

NOTES:

- 1) Inlet Pressure cannot exceed Body Pressure-Temperature Rating.
- 2) Shut-off pressures listed are with respect to stated ANSI Leakage Classes.
- 3) Flowing PSID for water service should be no greater than 2/3 of Inlet Pressure unless verified for absence of cavitation with Warren Valve Sizing Program.

CRN
REGISTERED

► APPLICATION:

Control of Saturated Steam; Water; Water & Glycol Solutions. Seat Leakage Class ANSI III & IV.

► VALVE CONSTRUCTION:

Body: ANSI B16.15 Bronze 250lb. Threaded (NPT), or Stainless Steel (CF8M) 300 lb. Threaded (NPT)
Trim: EQ%, 316 Series Stainless Steel
Stem: 316 Stainless Steel
Bonnet: Brass / Bronze or 316 Stainless Steel
Packing: EPDM Lip Packing (+20 to 350°F) Standard
(EPDM is **not** suitable for use with oils, hydrocarbons, or acids.)
PTFE V-Ring, (+60 to 350°F) Optional, must be specified on order
Agency Approval: CRN # CSA - OC18997 (Bronze Body Only)

► TRIM LIMITS (Flowing Differential Pressure):

S/S Trim: Liquid or Steam 100 PSID

► ACTUATOR SPECIFICATIONS:

Control Signal: 2-10 Vdc
(4-20 mA dc with 500 ohm resistor Kit KR500-supplied with motor)
Control Action, Loss of Signal: Increasing Signal Opens Valve, Loss of Signal Closes Valve (Default Setting)
Reversible with Switch. Can be specified when ordering.
Feedback Signal: 2-10 Vdc
Power Supply: 24 VAC/DC
Loss of Power: **E024 & E029** (FAIL LAST POSITION)
E031 (E029 w/ VMS-50 BCM, FAIL SAFE TO LOSS OF SIGNAL POSITION)
E025 & E026 (ELECTRONIC FAIL SAFE) Fail Closed (Default Setting)
Reversible with Switch. Can be specified when ordering.
Power Consumption
Running: **E024** 2W; **E025** 3W; **E026** 5W; **E029** 6W;
E031 Battery Charging 12.84W; Battery charged 7.2W
Holding: **E024** 1.5W; **E025** 2W; **E026** 2W; **E029** 1.5W;
E031 Battery Charging 8.34W; Battery charged 2.7W
Transformer sizing: **E024** 4VA; **E025** 7VA; **E026** 9.5VA; **E029** 11VA;
(24VAC Class 2) **E031** N/A;
Switching Power Supply **E031** 24Vdc 2.0A
Timing: See Configuration Tables
Manual Override: Hex crank (supplied with actuator)
Construction: Aluminum Die Cast and Plastic Housing
Locations: NEMA Type 2 / IP54, UL enclosure type 2
Temperature Limits: +32°F to 122°F Ambient
Mounting: Vertical above centerline of valve
Safety Agency Listing: CE, cULus

► VMS-50 BCM (BACK-UP CONTROL MODULE) SPECIFICATIONS:

Required for Fail Safe Operation with fail last position (Actuators E024 & E029)
(One VMS-50BCM can operate one, two or three actuators at a time)
The E031 includes a VMS-50 BCM. The VMS-50 BCM does not include a VMS-50 PS.
Fail Direction: Fail Safe to Loss of Signal Position
Power Requirement: 24 Vdc 2.0 A from Separate External Switching Power Supply
Power Output: 24 Vdc 48W Total
Construction: Battery w/Circuit Board & Transformer in the Nema 4x Enclosure
Mounting: Wall Mount
Dimensions: 8.75" (W) x 6.97" (H) x 5.19" (D) (See page 34)
Safety Agency Listing: Not Listed

► VMS-50 PS (SWITCHING POWER SUPPLY) SPECIFICATIONS:

Required to supply 24Vdc power to the VMS-50 BCM Back-up Control Module
The VMS-50 BCM does not include a VMS-50 PS.

Input: 115 VAC 50/60 Hz 1.5A
Power Output: 24 Vdc 2.0 A
Input Connector: Three Pin Input Plug
Construction: Molded Plastic
Dimensions: 4.31" (L) x 2.16" (W) x 1.62" (H)
Safety Agency Listing: UL Listed

Note: If the building already has a 24 Vdc circuit rated at or above 2.0 Amps that is available for use with the VMS-50 BCM, then the VMS-50 PS is not required.

SINGLE SEATED BRONZE AND STAINLESS STEEL - 1/2" - 2"

VA2010CC-E025

VA2013CC-E029

NOTES:

- 1) Inlet Pressure cannot exceed Body Pressure-Temperature Rating.
- 2) Shut-off pressures listed are with respect to stated ANSI Leakage Classes.
- 3) Flowing PSID for water service should be no greater than 2/3 of Inlet Pressure unless verified for absence of cavitation with Warren Valve Sizing Program.

CRN
REGISTERED

► APPLICATION:

Control of Saturated Steam; Water; Water & Glycol Solutions to 60%. Seat Leakage Class ANSI III & IV.

► VALVE CONSTRUCTION:

Body: ANSI B16.1 Iron 125lb. Flange or 250lb. Flange
Trim: EQ%, Bronze or 300 Series Stainless Steel
Stem: 316 Stainless Steel
Bonnet: Brass
Packing: EPDM Lip Packing (+20 to 350°F) Standard
(EPDM is **not** suitable for use with oils, hydrocarbons, or acids.)
PTFE V-Ring, (+60 to 350°F) Optional, must be specified on order
Agency Approval: CRN # CSA - OC20496 (Excludes 250# Type 22/32)

► TRIM LIMITS (Flowing Differential Pressure):

Brz Trim: Liquid or Steam to 40 PSID
S/S Trim: Liquid or Steam 100 PSID

► ACTUATOR SPECIFICATIONS:

Control Signal: 2-10 Vdc
(4-20 mAdc with 500 ohm resistor Kit KR500-supplied with motor)
Control Action, Loss of Signal: Increasing Signal Opens Valve, Loss of Signal Closes Valve
(Default Setting)
Reversible with Switch. Can be specified when ordering.
Feedback Signal: 2-10 Vdc
Power Supply: 24 VAC/DC
Loss of Power: **E029** (FAIL LAST POSITION)
E031 (E029 w/ VMS-50 BCM, FAIL SAFE TO LOSS OF SIGNAL POSITION)
E026 (ELECTRONIC FAIL SAFE) Fail Closed (Default Setting)
Reversible with Switch. Can be specified when ordering.
Power Consumption
Running: **E026** 5W; **E029** 6W;
E031 Battery charging 12.84W; Battery charged 7.2W
Holding: **E026** 2W; **E029** 1.5W;
E031 Battery charging 8.34W; Battery charged 2.7W;
Transformer sizing: **E026** 9.5VA; **E029** 11VA;
(24VAC Class 2) **E031** N/A
Switching Power Supply **E031** 24Vdc 2.0A
Timing: See Configuration Tables
Manual Override: Hex crank (supplied with actuator)
Construction: Aluminum Die Cast and Plastic Housing
Locations: NEMA Type 2 / IP54, UL enclosure type 2
Temperature Limits: +32°F to 122°F Ambient
Mounting: Vertical above centerline of valve
Safety Agency Listing: CE, cULus

► VMS-50 BCM (BACK-UP CONTROL MODULE) SPECIFICATIONS:

Required for Fail Safe Operation with fail last position (Actuators E024 & E029)
(One VMS-50BCM can operate one, two or three actuators at a time)
The E031 includes a VMS-50 BCM. The VMS-50 BCM does not include a VMS-50 PS.
Fail Direction: Fail Safe to Loss of Signal Position
Power Requirement: 24 Vdc 2.0 A from Separate External Switching Power Supply
Power Output: 24 Vdc 48W Total
Construction: Battery w/Circuit Board & Transformer in the Nema 4x Enclosure
Mounting: Wall Mount
Dimensions: 8.75" (W) x 6.97" (H) x 5.19" (D) (See page 34)
Safety Agency Listing: Not Listed

► VMS-50 PS (SWITCHING POWER SUPPLY) SPECIFICATIONS:

Required to supply 24Vdc power to the VMS-50 BCM Back-up Control Module
The VMS-50 BCM does not include a VMS-50 PS.
Input: 115 VAC 50/60 Hz 1.5A
Power Output: 24 Vdc 2.0 A
Input Connector: Three Pin Input Plug
Construction: Molded Plastic
Dimensions: 4.31" (L) x 2.16" (W) x 1.62" (H)
Safety Agency Listing: UL Listed

Note: If the building already has a 24 Vdc circuit rated at or above 2.0 Amps that is available for use with the VMS-50 BCM, then the VMS-50 PS is not required.

DOUBLE SEATED BALANCED IRON - 1 1/2" - 2"

► APPLICATION:

Control of Saturated Steam; Water; Water & Glycol Solutions. Seat Leakage Class ANSI III.

► VALVE CONSTRUCTION:

Body: ANSI B16.15 Iron 250lb.Threaded (NPT)
 Trim: EQ%, 300 Series Stainless Steel
 Stem: 316 Stainless Steel
 Bonnet: Brass
 Packing: EPDM Lip Packing (+20 to 350°F) Standard
 (EPDM is **not** suitable for use with oils, hydrocarbons, or acids.)
 PTFE V-Ring, (+60 to 350°F) Optional, must be specified on order
 Agency Approvals: None

► TRIM LIMITS (Flowing Differential Pressure):

S/S Trim: Liquid or Steam 100 PSID

► ACTUATOR SPECIFICATIONS:

Control Signal: 2-10 Vdc
 (4-20 mA_{dc} with 500 ohm resistor Kit KR500-supplied with motor)
 Control Action, Loss of Signal: Increasing Signal Opens Valve, Loss of Signal Closes Valve
 (Default Setting)
 Reversible with Switch. Can be specified when ordering.

Feedback Signal: 2-10 Vdc

Power Supply: 24 VAC/DC
 Loss of Power: **E024** (FAIL LAST POSITION)
E025 (ELECTRONIC FAIL SAFE) Fail Closed (Default Setting)
 Reversible with Switch. Can be specified when ordering.

Power Consumption
 Running: **E024** 2W; **E025** 3W;
 Holding: **E024** 1.5W; **E025** 2W;
 Transformer sizing: **E024** 4VA; **E025** 7VA;
 (24VAC Class 2)
 Timing: See Configuration Tables
 Manual Override: Hex crank (supplied with actuator)
 Construction: Aluminum Die Cast and Plastic Housing
 Locations: NEMA Type 2 / IP54, UL enclosure type 2
 Temperature Limits: +32°F to 122°F Ambient
 Mounting: Vertical above centerline of valve
 Safety Agency Listing: CE, cULus

► VMS-50 BCM (BACK-UP CONTROL MODULE) SPECIFICATIONS:

Required for Fail Safe Operation with fail last position (Actuators E024 & E029)
 (One VMS-50BCM can operate one, two or three actuators at a time)

The E031 includes a VMS-50 BCM. The VMS-50 BCM does not include a VMS-50 PS.

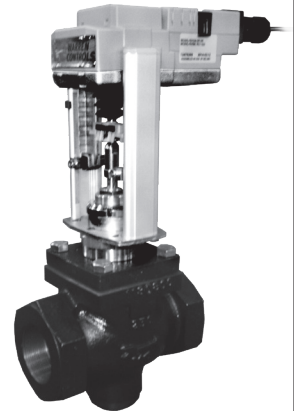

Fail Direction: Fail Safe to Loss of Signal Position
 Power Requirement: 24 Vdc 2.0 A from Separate External Switching Power Supply
 Power Output: 24 Vdc 48W Total
 Construction: Battery w/Circuit Board & Transformer in the Nema 4x Enclosure
 Mounting: Wall Mount
 Dimensions: 8.75" (W) x 6.97" (H) x 5.19" (D) (See page 34)
 Safety Agency Listing: Not Listed

► VMS-50 PS (SWITCHING POWER SUPPLY) SPECIFICATIONS:

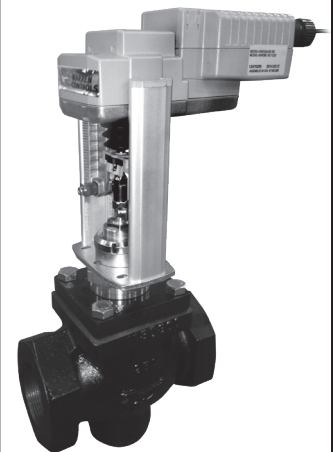

Required to supply 24Vdc power to the VMS-50 BCM Back-up Control Module
 The VMS-50 BCM does not include a VMS-50 PS.

Input: 115 VAC 50/60 Hz 1.5A
 Power Output: 24 Vdc 2.0 A
 Input Connector: Three Pin Input Plug
 Construction: Molded Plastic
 Dimensions: 4.31" (L) x 2.16" (W) x 1.62" (H)
 Safety Agency Listing: UL Listed

Note: If the building already has a 24 Vdc circuit rated at or above 2.0 Amps that is available for use with the VMS-50 BCM, then the VMS-50 PS is not required.

VA2208BC-E024

VA2209BC-E025

NOTES:

- 1) Inlet Pressure cannot exceed Body Pressure-Temperature Rating.
- 2) Shut-off pressures listed are with respect to stated ANSI Leakage Classes.
- 3) Flowing PSID for water service should be no greater than 2/3 of Inlet Pressure unless verified for absence of cavitation with Warren Valve Sizing Program.

Allow 6 inch clearance above actuator for removal / service.

*Center line of Valve to Outside Actuator

ELECTRICALLY ACTUATED

3-WAY MIXING IRON - 2 1/2" - 6"

NOTES:

- 1) Inlet Pressure cannot exceed Body Pressure-Temperature Rating.
- 2) Shut-off pressures listed are with respect to stated ANSI Leakage Classes.
- 3) Flowing PSID for water service should be no greater than 2/3 of Inlet Pressure unless verified for absence of cavitation with Warren Valve Sizing Program.

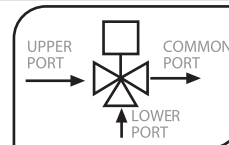

► APPLICATION:

Control of Water; Water & Glycol Solutions to 60%. Valves mix two flows together (Converging).
Seat Leakage ANSI Class III & IV.

► VALVE CONSTRUCTION:

Body: ANSI B16.1 Iron 125lb. Flange
or 250lb. Flange
Trim: Linear, Bronze or 300 Series Stainless Steel
Stem: 316 Stainless Steel
Bonnet: Brass
Packing: EPDM Lip Packing (+20 to 350°F) Standard
(EPDM is **not** suitable for use with oils, hydrocarbons, or acids.)
PTFE V-Ring, (+60 to 350°F) Optional, must be specified on order
Agency Approval: CRN # CSA - OC20496 (Excludes 250# Type 22/32)

► TRIM LIMITS (Flowing Differential Pressure):

S/S Trim: Liquid to 100 PSID

► ACTUATOR SPECIFICATIONS:

Control Signal: 2-10 Vdc
(4-20 mAdc with 500 ohm resistor Kit KR500-supplied with motor)
Control Action, Loss of Signal: Increasing Signal Opens Lower Port/ Closes Upper Port,
Loss of Signal Closes Lower Port/ Opens Upper Port (Default Setting)
Reversible with Switch. Can be specified when ordering.
Feedback Signal: 2-10 Vdc
Power Supply: 24 VAC/DC
Loss of Power: **E024 & E029** (FAIL LAST POSITION)
E031 (E029 w/ VMS-50 BCM, FAIL SAFE TO LOSS OF SIGNAL POSITION)
E025 & E026 (ELECTRONIC FAIL SAFE)
Fail Lower Port Closed/ Upper Port Open (Default Setting)
Reversible with Switch. Can be specified when ordering.
Power Consumption
Running: **E024** 2W; **E025** 3W; **E026** 5W; **E029** 6W;
E031 Battery Charging 12.84W; Battery charged 7.2W
Holding: **E024** 1.5W; **E025** 2W; **E026** 2W; **E029** 1.5W;
E031 Battery Charging 8.34W; Battery charged 2.7W
Transformer sizing: **E024** 4VA; **E025** 7VA; **E026** 9.5VA; **E029** 11VA;
(24VAC Class 2) **E031** N/A
Switching Power Supply **E031** 24Vdc 2.0A
Timing: See Configuration Tables
Manual Override: Hex crank (supplied with actuator)
Construction: Aluminum Die Cast and Plastic Housing
Locations: NEMA Type 2 / IP54, UL enclosure type 2
Temperature Limits: +32°F to 122°F Ambient
Mounting: Vertical above centerline of valve
Safety Agency Listing: CE, cULus

► VMS-50 BCM (BACK-UP CONTROL MODULE) SPECIFICATIONS:

Required for Fail Safe Operation with fail last position (Actuators E024 & E029)

(One VMS-50BCM can operate one, two or three actuators at a time)

The E031 includes a VMS-50 BCM. The VMS-50 BCM does not include a VMS-50 PS.

Fail Direction: Fail Safe to Loss of Signal Position
Power Requirement: 24 Vdc 2.0 A from Separate External Switching Power Supply
Power Output: 24 Vdc 48W Total
Construction: Battery w/Circuit Board & Transformer in the Nema 4x Enclosure
Mounting: Wall Mount
Dimensions: 8.75" (W) x 6.97" (H) x 5.19" (D) (See page 34)
Safety Agency Listing: Not Listed

► VMS-50 PS (SWITCHING POWER SUPPLY) SPECIFICATIONS:

Required to supply 24Vdc power to the VMS-50 BCM Back-up Control Module

The VMS-50 BCM does not include a VMS-50 PS.

Input: 115 VAC 50/60 Hz 1.5A
Power Output: 24 Vdc 2.0 A
Input Connector: Three Pin Input Plug
Construction: Molded Plastic
Dimensions: 4.31" (L) x 2.16" (W) x 1.62" (H)
Safety Agency Listing: UL Listed

Note: If the building already has a 24 Vdc circuit rated at or above 2.0 Amps that is available for use with the VMS-50 BCM, then the VMS-50 PS is not required.

3-WAY MIXING IRON - 2 1/2" - 6"

ELECTRICALLY ACTUATED

3-WAY DIVERTING BRONZE 1" - 2"

► APPLICATION:

Control of Water; Water & Glycol Solutions. Valves divert one flow into two directions (Diverting).
Seat Leakage ANSI Class II.

► VALVE CONSTRUCTION:

Body: Size 1, 1-1/2 & 2 inch
ANSI B16.15 Bronze 250lb. Threaded (NPT)
Trim: Linear, Bronze
Stem: 316 Stainless Steel
Bonnet: Brass
Packing: EPDM Lip Packing (+20 to 350°F) Standard
(EPDM is **not** suitable for use with oils,
hydrocarbons, or acids.) PTFE V-Ring,
(+60 to 350°F) Optional, must be specified on order
O-Ring: EPR +20 to 300°F
Agency Approval: CRN # CSA - OC18997 (Bronze Body Only)

VA3208AA-E025

► TRIM LIMITS (Flowing Differential Pressure):

Brz Trim: Liquids to 40 PSID

► ACTUATOR SPECIFICATIONS:

Control Signal: 2-10 Vdc
(4-20 mAdc with 500 ohm resistor Kit KR500-supplied with motor)
Control Action, Loss of Signal: Increasing Signal Opens Lower Port/ Closes Upper Port,
Loss of Signal Closes Lower Port/ Opens Upper Port (Default Setting)
Reversible with Switch. Can be specified when ordering.
Feedback Signal: 2-10 Vdc
Power Supply: 24 VAC/DC
Loss of Power: **E024** (FAIL LAST POSITION)
E025 (ELECTRONIC FAIL SAFE)
Fail Lower Port Closed/ Upper Port Open (Default Setting)
Reversible with Switch. Can be specified when ordering.
Power Consumption
Running: **E024** 2W; **E025** 3W;
Holding: **E024** 1.5W; **E025** 2W;
Transformer Sizing: **E024** 4VA; **E025** 7VA;
(24VAC Class 2)
Timing: See Configuration Tables
Manual Override: Hex crank (supplied with actuator)
Construction: Aluminum Die Cast and Plastic Housing
Locations: NEMA Type 2 / IP54, UL enclosure type 2
Temperature Limits: +32°F to 122°F Ambient
Mounting: Vertical above centerline of valve
Safety Agency Listing: CE, cULus

NOTES:

- 1) Inlet Pressure cannot exceed Body Pressure-Temperature Rating.
- 2) Shut-off pressures listed are with respect to stated ANSI Leakage Classes.
- 3) Flowing PSID for water service should be no greater than 2/3 of Inlet Pressure unless verified for absence of cavitation with Warren Valve Sizing Program.
- 4) The difference between the upper port and the lower port pressure must not exceed 50 PSID.

► VMS-50 BCM (BACK-UP CONTROL MODULE) SPECIFICATIONS:

Required for Fail Safe Operation with fail last position (Actuators E024 & E029)
(One VMS-50BCM can operate one, two or three actuators at a time)
The E031 includes a VMS-50 BCM. The VMS-50 BCM does not include a VMS-50 PS.

Fail Direction: Fail Safe to Loss of Signal Position
Power Requirement: 24 Vdc 2.0 A from Separate External Switching Power Supply
Power Output: 24 Vdc 48W Total
Construction: Battery w/Circuit Board & Transformer in the Nema 4x Enclosure
Mounting: Wall Mount
Dimensions: 8.75" (W) x 6.97" (H) x 5.19" (D) (See page 34)
Safety Agency Listing: Not Listed

► VMS-50 PS (SWITCHING POWER SUPPLY) SPECIFICATIONS:

Required to supply 24Vdc power to the VMS-50 BCM Back-up Control Module
The VMS-50 BCM does not include a VMS-50 PS.

Input: 115 VAC 50/60 Hz 1.5A
Power Output: 24 Vdc 2.0 A
Input Connector: Three Pin Input Plug
Construction: Molded Plastic
Dimensions: 4.31" (L) x 2.16" (W) x 1.62" (H)
Safety Agency Listing: UL Listed

Note: If the building already has a 24 Vdc circuit rated at or above 2.0 Amps that is available for use with the VMS-50 BCM, then the VMS-50 PS is not required.

Bonnet: Brass
Packing: EPDM Lip Packing (+20 to 350°F) Standard
(EPDM is **not** suitable for use with oils,
hydrocarbons, or acids.) PTFE V-Ring,
(+60 to 350°F) Optional, must be specified on order

O-Ring: EPR +20 to 300°F (2-1/2 thru 5 in); +20 to 150°F (6 in)
Agency Approval: CRN # CSA - OC20496 (Excludes 250# Type 22/32)

► TRIM LIMITS (Flowing Differential Pressure):

Brz Trim: Liquids to 40 PSID
S/S Trim: Liquids to 100 PSID

► ACTUATOR SPECIFICATIONS:

Control Signal: 2-10 Vdc
(4-20 mA dc with 500 ohm resistor Kit KR500-supplied with motor)
Control Action, Loss of Signal: Increasing Signal Opens Lower Port/ Closes Upper Port,
Loss of Signal Closes Lower Port/ Opens Upper Port (Default Setting)
Reversible with Switch. Can be specified when ordering.
Feedback Signal: 2-10 Vdc
Power Supply: 24 VAC/DC
Loss of Power: **E029** (FAIL LAST POSITION)
E031 (E029 w/ VMS-50 BCM, FAIL SAFE TO LOSS OF SIGNAL POSITION)
E026 (ELECTRONIC FAIL SAFE)
Fail Lower Port Closed/ Upper Port Open (Default Setting)
Reversible with Switch. Can be specified when ordering.
Power Consumption
Running: **E026** 5W; **E029** 6W;
E031 Battery Charging 12.84W; Battery charged 7.2W
Holding: **E026** 2W; **E029** 1.5W;
E031 Battery Charging 8.34W; Battery charged 2.7W
Transformer sizing: **E026** 9.5VA; **E029** 11VA;
E031 N/A
Switching Power Supply **E031** 24 Vdc 2.0A
Timing: See Configuration Tables
Manual Override: Hex crank (supplied with actuator)
Construction: Aluminum Die Cast and Plastic Housing
Locations: NEMA Type 2 / IP54, UL enclosure type 2
Temperature Limits: +32°F to 122°F Ambient
Mounting: Vertical above centerline of valve
Safety Agency Listing: CE, cULus

► VMS-50 BCM (BACK-UP CONTROL MODULE) SPECIFICATIONS:

Required for Fail Safe Operation with fail last position (Actuators E024 & E029)
(One VMS-50BCM can operate one, two or three actuators at a time)
The E031 includes a VMS-50 BCM. The VMS-50 BCM does not include a VMS-50 PS.
Fail Direction: Fail Safe to Loss of Signal Position
Power Requirement: 24 Vdc 2.0 A from Separate External Switching Power Supply
Power Output: 24 Vdc 48W Total
Construction: Battery w/Circuit Board & Transformer in the Nema 4x Enclosure
Mounting: Wall Mount
Dimensions: 8.75" (W) x 6.97" (H) x 5.19" (D) (See page 34)
Safety Agency Listing: Not Listed

► VMS-50 PS (SWITCHING POWER SUPPLY) SPECIFICATIONS:

Required to supply 24Vdc power to the VMS-50 BCM Back-up Control Module
The VMS-50 BCM does not include a VMS-50 PS.
Input: 115 VAC 50/60 Hz 1.5A
Power Output: 24 Vdc 2.0 A
Input Connector: Three Pin Input Plug
Construction: Molded Plastic
Dimensions: 4.31" (L) x 2.16" (W) x 1.62" (H)
Safety Agency Listing: UL Listed

VA3213CA-E029

NOTES:

- 1) Inlet Pressure cannot exceed Body Pressure-Temperature Rating.
- 2) Shut-off pressures listed are with respect to stated ANSI Leakage Classes.
- 3) Flowing PSID for water service should be no greater than 2/3 of Inlet Pressure unless verified for absence of cavitation with Warren Valve Sizing Program.
- 4) The difference between the upper port and the lower port pressure must not exceed 50 PSID.

Note: If the building already has a 24 Vdc circuit rated at or above 2.0 Amps that is available for use with the VMS-50 BCM, then the VMS-50 PS is not required.

ELECTRICALLY ACTUATED

3-WAY DIVERTING IRON 2 1/2" - 6"

BCM (Back-Up Control Module) SPECIFICATIONS

VMS-50 BCM SPECIFICATIONS

Actuator Usage:	Models E024, E029 or E031 (NOTE: E031 is an E029 Actuator with a VMS-50-BCM. This does not include the VMS-50-PS.)
Power Requirement:	24 Vdc 2.0 A from Separate External; Switching Power Supply
Power Output:	24 Vdc 48W Total
Number Actuators:	One, Two or Three
Construction:	Battery w/Circuit Board and Charger
Circuit Board Protection:	Fuse Littelfuse T6.3AH250VP
Enclosure Type:	NEMA 4X, IP66, UL 4X, CSA 4X
Flame Retardant:	UL 50
Construction:	UV Stabilized Fiberglass Reinforced Polyester, Polycarbonate Hinge and Closed Cell Neoprene Gasket
Connections:	Two 1/2 IN conduit with one plug
Number Batteries:	One
Initial Charge:	2-4 hours
Output Cycle Time:	6.0 Minutes from loss of power until circuit board times out
Battery Life:	Up to 5 years ...
Indication:	Replacement battery model SP12-1.2 (12V1.4AH/T1) Red REPLACE BATTERY LED ON indicates Replace Battery (See REPLACE BATTERY LED Function)
Dimensions:	8.75" (W) x 6.97" (H) x 5.19" (D)
Mounting:	Feet for Wall Mount (4.91" x 8.75" centers)
Environmental:	Operating/ Storage: Ambient +32°F to +104°F (0 to +40°C) – due to battery
Weight:	4.15 lbs (1.9 kg)
Safety Agency Listing:	Not listed

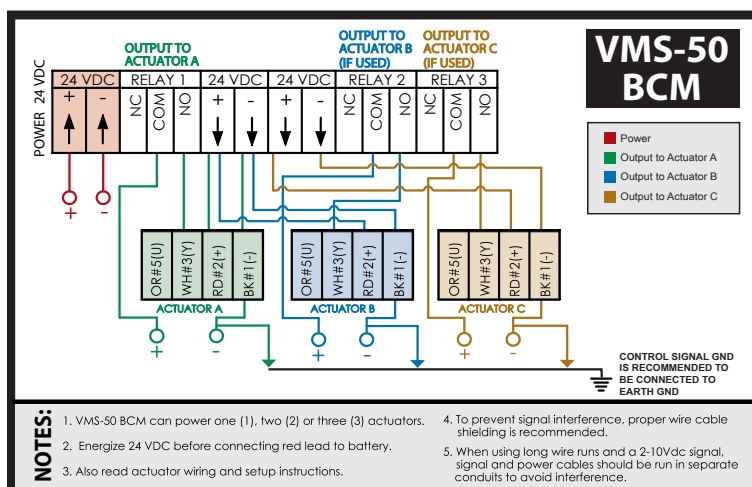

VMS-50 PS SEPARATE EXTERNAL SWITCHING POWER SUPPLY

Usage:	VMS-50 BCM (VMS-50 BCM does not include VMS-50 PS)
Input:	115 VAC 50/60 Hz 1.5A
Indication:	Red LED ON indicates Input Line Voltage Present
Output:	24 Vdc 2.0 A
Input Connector:	Three Pin Input Plug
Construction:	Molded Plastic
Dimensions:	4.31" (L) x 2.16" (W) x 1.62" (H)
Environmental:	Operating/ Storage: Ambient +32°F to +113°F (0 to +45°C)/ -40°F to +185°F/(-40 to +85°C)
Weight:	0.5 lbs (0.2 kg)
Safety Agency Listing:	UL listed
Safety Agency Listing:	Two 1/2 IN conduit with one plug

RELAY 3 NC	Normally Closed Relay Contact 3rd Actuator
RELAY 3 COM	Common Relay Contact/Control Signal (+) 3rd Actuator
RELAY 3 NO	Normally Open Relay Contact 3rd Actuator

Operation:

Proportional Normal:

24 Vdc External Power Supply LOAD connected to 24 Vdc IN terminals of VMS-50 BCM. Building Power Source, 115 VAC 50/60 Hz required for VMS-50 PS, connected to 24 Vdc External Power Supply LINE. Actuator responds to modulating input signal.

Power Failure: 24 Vdc OUT from VMS-50 BCM changes from 24 Vdc from External Power Supply to 24 Vdc from battery/inverter. Relay(s) break the connection between Common and Normally Open Contact terminals

forcing the actuator(s) to go to the signal failure direction for their rotation switch position (See page 13 for explanation of rotation switch position).

Loss of Signal: 24 Vdc External Power Supply connected to 24 Vdc IN terminals of VMS-50 BCM. Building Power Source, 115 VAC 50/60 Hz required for VMS-50 PS, connected to 24 Vdc External Power Supply. The control signal is broken forcing the actuator(s) to go to the signal failure direction for their rotation switch position (See page 13 for explanation of rotation switch position).

WARREN CONTROLS INC. (Hereinafter called "Seller") agrees to supply the equipment covered herein on the following terms and conditions. Additional terms and conditions not covered herein will be accepted only upon mutual agreement in writing.

ORDERS: Contracts and orders are subject to acceptance by the home office of the Seller.

FREIGHT TERMS: All Prices are FOB factory (Bethlehem, PA).

MINIMUM ORDER REQUIREMENT: All orders must have a minimum net value of \$400.

PRICES AND DISCOUNTS: All prices and discounts are in accordance with the established price and discount schedules of the Seller, and are subject to change without notice.

PRICE LIST: The price list is not an offer to sell to any person who possesses it, nor to anyone else, the goods listed herein at the prices shown. All prices herein set forth supersede all prior price lists and are subject to change without notice. Warren Controls Incorporated may also, from time to time, discontinue, without notice, the sale of any of the products herein.

TAXES: The amount of any present or future sales, use, occupancy, excise, or other tax, federal, state or local, which the Seller now, or hereafter shall be legally obligated to pay, either on its own behalf or on the behalf of the purchaser or otherwise, with respect to the material covered by this order or contract, shall (unless the prices contained herein are stated expressly to include such tax) be added to such prices and paid by the purchaser. Purchaser agrees to report and pay any such tax directly on any non-exempt transaction, when Seller's invoices do not indicate such a charge.

REMITTANCES: All invoices shall be due and payable in United States currency, free of exchange, collection, or any other charges, net 30 days, or as otherwise agreed upon and set forth in writing by Seller. Past due invoices are subject to a carrying charge of 1% per month. The purchaser, if so requested, agrees to furnish Seller with all information, including financial statements, necessary to make proper credit appraisal. Refusal to supply such information may cause a quotation to be withdrawn. Quotations for extended periods are subject to change with reasonable notice.

LIABILITY: The buyer shall remain primarily liable for the purchase price and the Seller shall not be obliged to accept any term or condition of payment which will shift liability to a third person not a party to the contract of sale, whether or not such third person is the United States Government, its agents or instrumentalities.

RUSH ORDERS: Expediting is something that we at Warren Controls Incorporated endeavor to accommodate whenever possible but must be requested and promised on a case-by-case basis. Premium freight is not assumed and must be specified on the purchase order.

DISCONTINUANCES OF DELIVERIES: Should the purchaser's financial responsibility be or become unsatisfactory to the Seller, cash payment or satisfactory security at any time may be demanded by the Seller, and if not furnished to the Seller's satisfaction, the Seller may at its option discontinue deliveries and charge the purchaser for the sale value of any completed or partly completed articles manufactured pursuant to the order or contract.

PARTIAL SHIPMENTS: Seller reserves the right to make partial shipments from time to time and render invoices therefore, which shall be due and payable as provided in paragraph entitled "Remittances".

DELAYS: The Seller shall not be liable for any loss, damage, or delay occasioned by any causes beyond the Seller's control, including, but not limited to governmental actions or orders, embargoes, strikes, differences with workers, fires, floods, accidents, or transportation delays. IN NO EVENT SHALL SELLER BE LIABLE FOR ANY CONSEQUENTIAL OR SPECIAL DAMAGES.

WEIGHTS AND DIMENSIONS: Shipping weights and dimensions given in catalogs and drawings are as close to actual as practicable but are not guaranteed. No claims will be allowed because of any discrepancy between actual weights or dimensions of material shipped and listed data in catalog.

SHIPPING AND PACKING: All material is carefully packed for shipment and Seller will not be responsible for loss, delay or breakage after having received "in good order" receipts from the transportation company. All claims for breakage, loss, delay and damage should be made to carriers, but Seller will render all possible assistance in securing satisfactory adjustment of such claims. Goods will be shipped by the method and via carrier Seller believes dependable, unless the buyer designates the carrier. Goods held at factory beyond delivery date for convenience of buyer will be invoiced on date of completion and terms of payment will apply as from invoice date. Such goods will be subject to charges for warehousing and other expenses incident to such delay.

REJECTION OF SHIPMENT: If the purchaser is unable or unwilling to accept any shipment, the purchaser shall be liable to the Seller, in addition to any other rights for which the Seller may be entitled, for freight, express, storage, extra cost of handling, and other expenses incurred thereby.

CANCELLATION: All orders are firm and are not subject to cancellation or change in specifications, shipping schedules or other conditions without Seller's written consent, which will be given only upon agreement to compensate for loss caused by such cancellation or changes.

SHORTAGE CLAIMS: Claims for shortage or incorrect filling of orders must be made within 60 days from date of delivery.

WARRANTY: The Seller warrants that the equipment manufactured by it and covered by this order is free from defects in material and workmanship and, without charge, product found to be defective in material or workmanship will be repaired, or at Seller's option replaced F.O.B. original point of shipment, if written notice of failure is received by Seller within one (1) year after date of shipment for valve bodies and five (5) years after date of shipment for catalogued HVAC/BAC electric actuators (unless specifically noted elsewhere), provided said product has been properly installed, operated in accordance with the Seller's instructions, and provided such defects are not due to abuse or decomposition by chemical or galvanic action. THIS EXPRESS WARRANTY IS IN LIEU OF AND EXCLUDES ALL OTHER WARRANTIES, GUARANTEES, OR REPRESENTATIONS, EXPRESS OR IMPLIED. THERE IS NO IMPLIED WARRANTY OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE. Seller assumes no responsibility for repairs made on the Seller's equipment unless done by the Seller's authorized personnel, or by written authority from the Seller. The Seller makes no guarantee with respect to material not manufactured by it. Seller shall not be liable for consequential damage in case of any failure to meet the conditions of any guarantee or shipping schedule, nor will claims for labor, loss of profits, repairs or other expenses incidental to replacement be allowed. The Seller in connection with the manufacture and sale of its equipment makes no other representation, guarantee or warranty, expressed or implied.

PURCHASER'S REMEDIES: The purchaser's remedies with respect to equipment manufactured by Seller covered by this order or contract and found to be defective shall be limited exclusively to the right of repair or replacement of such defective equipment. IN NO EVENT SHALL SELLER BE LIABLE FOR CLAIMS (BASED UPON BREACH OF CONTRACT, BREACH OF EXPRESS OR IMPLIED WARRANTY, OR NEGLIGENCE) FOR ANY OTHER DAMAGES, WHETHER DIRECT, IMMEDIATE, FORESEEABLE, CONSEQUENTIAL, OR SPECIAL OR FOR ANY EXPENSES INCURRED BY REASON OF THE USE OR MISUSE, SALE OR FABRICATION OF PRODUCTS WHICH DO OR DO NOT CONFORM TO THE TERMS AND CONDITIONS OF THIS ORDER OR CONTRACT.

CONSEQUENTIAL DAMAGES: IN NO EVENT SHALL BUYER BE ENTITLED TO RECOVER ANY CONSEQUENTIAL OR INCIDENTAL DAMAGES, INCLUDING BUT NOT LIMITED TO ANY COMMERCIAL LOSS OR INJURY TO ANY PERSON, WHETHER OR NOT SAID DAMAGES ARE CAUSED, IN WHOLE OR IN PART, BY ANY DELAY, FAILURE, NONPERFORMANCE OR NEGLIGENCE OF SELLER, OR THE BREACH BY SELLER OF ANY OF THE TERMS OF SALE CONTAINED HEREIN OR ANY OTHER TERM OR CONDITION MADE A PART OF THE CONTRACT BETWEEN SELLER AND BUYER.

RETURNS: Return material shipments shall be prepaid and clearly marked with a Sales Shipping Authorization (SSA) number issued by the Seller. Items returned for repair shall include detailed information about the application/installation, and the nature of the trouble experienced. Credit may be issued by the Seller for unused, current product, returned in saleable condition, after deduction of a restocking fee, typically 25% of the purchase price. Warranty coverage, or credit consideration, will be determined only after receipt and inspection of the material by the Seller.

BOND PREMIUMS: In the event the Seller shall be required as a condition of the manufacture and sale of equipment to furnish a performance bond, the buyer shall pay as a part of the purchase price of said equipment all bond premiums and expense in connection therewith.

DESIGNS: All designs and specifications shown in Seller's catalog are subject to change without notice.

PATENT INFRINGEMENT: The Seller will hold the purchaser and user harmless from infringement of any United States patent covering equipment of its manufacture. This, of necessity, is limited to the equipment per se and cannot be extended to applications of such equipment by others. The purchaser and user shall advise the Seller immediately in the event any claims of infringement are brought to their attention.

COMPLIANCE WITH LAWS: Seller has complied with all applicable Federal, State and local laws and regulations in connection with the manufacture and sale of all equipment. No responsibility or liability will be taken for import duties, laws, regulations or taxes imposed by any foreign country.

GOVERNING LAW: This contract shall be governed by, construed, and enforced in accordance with the laws of the State of Pennsylvania.

ERRORS: All clerical errors are subject to correction.

HVAC_BAC_ELEC_RevEa_0920

Warren Controls was founded in the early 1950's and was known as Warren Automatic Controls. Warren is the name of the county in New Jersey where the business was founded. The first products were regulators designed for the HVAC and marine industries. The company was purchased and renamed Warren Controls Corporation in 1971, largely specializing and growing in a variety of flow control products for commercial, industrial, and military applications.

In 2003, Warren Controls Inc., as we are known today now resides in a modern 60,000 Sq. Ft. manufacturing facility in Bethlehem, PA. Our product lines continue to grow through extensive product development and target marketing. Today, Warren offers four broad product lines for Building Automation Control Valves, Industrial Process Valves up to ANSI Class 300, Mechanical Level Controls for deaerators and boilers, and Military / Marine Valves to MIL specifications.

We serve a variety of end use and OEM customers and manage an extensive independent representative and distribution sales network. Find out who the local Sales Agent is in your area. Or, feel free to contact the company directly to answer your questions and serve your needs.
