Flowing Differential Pressure Limits .....  4
Flow Coefficients (Cv) Versus Travel .....  5
Sizing Reference and Load Sizing Calculations ..... 6
Shut-Off $\Delta \mathrm{P}$ and Cv Ratings ..... 7-11
Heat/Sound Pressure Levels Guidelines ..... 12-15
Dimensions and Weights ..... 16-17
Actuators, Positioners, and Accessories. ..... 18-22
Factory Default Settings ..... 23
Configurations ..... 24-26
CRN ..... 24
Fluid Temperature Limits ..... 25

## Peek Bearing

for low friction provides stem guiding and protects packing box from external debris.

## Robust Spring-Loaded PTFE V-Ring Packing

 has low friction and is self adjusting for zero maintenance.
## Peek Bearing in Lower Bonnet Assembly

 provides stem guiding and protects packing box from entrained solids for longer packing life.
## Thick Balancing Chamber

in bronze, 300 SS , or 17-4pH.

## EPDM O-Ring or Fluoraz

 O-Ring(for higher temperatures) maintains pressure balance seal.

## Plug and Seat

in choice of Bronze, 300 SS, $17-4 \mathrm{pH}$, or Alloy 6 provide Class IV leakage rating.

## Bottom Post Guide

for additional stability, allowing higher pressure drop.

Two-Way Double Seat Balanced Valve

Description: Warren Controls Series 2900 High Capacity General Purpose Globe Control Valves feature rugged iron bodies with a variety of trim materials. The equal percentage plugs in the 2-way valves and linear plugs in the 3-way valves provide excellent modulating control of a wide variety of fluids. The Series 2900 is ideally suited where value and long life are important objectives for applications including but not limited to: Food \& Beverage, Packaged Water Heaters, Pharmaceutical, General Service, and Waste Water having moderate pressure drops and temperatures from $-20^{\circ}$ to $400^{\circ} \mathrm{F}$.

## 2-Way Valves [Control of Liquids, Gases, and Steam]

2920 2-Way Single Seat Unbalanced Valve
The most commonly applied solution for sizes 3 " and under with ANSI Class IV leakage rating. See Table on page $\mathbf{2 5}$ for Fluid Temperature Limits.

| Sizes: | 2-1/2, 3, 4, 5, 6 inch |
| :--- | :--- |
| Body: | ANSI B16.1 Iron 125LB Flange or 250LB Flange |
| Trim: | Linear: 300 Series Stainless Steel (2-1/2 thru 4 only) <br>  <br>  <br> EQ\%: Bronze, 300 Series Stainless Steel <br> or 17-4 pH Hardened Stainless Steel |
| Packing: | Long-Life Multi-Stack, EPDM Lip Packing <br> (EPDM Lip Packing is not suitable for use with oils, <br> hydrocarbons, or acids.) <br> Guided Low-Friction TFE V-Ring, Spring Loaded Packing, <br>  <br> Adjustable Graphite Packing, |
| Rangeability: | $50: 1$ |

## 2922 2-Way Double Seat Balanced Valve

A balanced valve that is an effective solution for sizes over $3^{\prime \prime}$ and for higher pressures. Its double seat design allows for dirtier fluids and requires less force to operate than unbalanced valves so smaller actuators can be used. It is limited to ANSI Class III leakage rating. See Table on page $\mathbf{2 5}$ for Fluid Temperature Limits

| Sizes: | $2-1 / 2,3,4,5,6,8,10$ inch |
| :--- | :--- |
| Body: | ANSI B16.1 Iron 125LB Flange or 250LB Flange |
| Trim: | EQ\%: Bronze or 300 Series Stainless Steel |
| Packing: | Long-Life Multi-Stack, EPDM Lip Packing <br> (EPDM lip packing is not suitable for use with oils, <br> hydrocarbons, or acids) <br> Guided Low-Friction TFE V-Ring, Spring Loaded Packing, <br> Adjustable Graphite Packing |
| Rangeability: | $50: 1$ |

## 2923 2-Way Cylinder Balanced Valve

A balanced valve that is an effective solution for sizes over $3^{\prime \prime}$ and for higher pressures. It requires less force to operate than unbalanced valves so smaller actuators can be used. Its single seat o-ring seal design facilitates ANSI Class IV leakage rating. It is limited to cleaner fluids. See Table on page $\mathbf{2 5}$ for Fluid Temperature Limits.

| Sizes: | 2-1/2, 3, 4, 5, 6, 8 inch |
| :--- | :--- |
| Body: | ANSI B16.1 Iron 125LB Flange or 250LB Flange |
| Trim: | Linear: 300 Stainless Steel Only <br>  <br>  <br> EQ\%: 300 Series Stainless Steel,17-4 pH Hardened Stainless <br> Steel, or Alloy 6 |
| Packing: | Long-Life Multi-Stack, EPDM Lip Packing <br> (EPDM lip packing is not suitable for use with oils, <br>  <br>  <br>  <br>  <br>  <br> hydrocarbons, or acids.) <br> Guided Low-Friction TFE V-Ring, Spring Loaded Packing, <br> Adjustable Graphite Packing |
| O-Ring: | EPDM (BRZ) <br> *Fluoraz 797 (300 SS Trim, 17-4 pH or Alloy 6 Trim) |
| Rangeability: | $50: 1$ |

## 3-Way Valves [Control of Liquids]

## 2930 3-Way Mixing Valve

This valve has two inlets and one outlet, and is the simplest solution for mixing or bypass applications with an ANSI Class IV leakage rating. In normal applications the inlet pressures are near equal and control is possible from $5 \%$ to $95 \%$ of travel with inlet pressures up to 100 PSI . See Table on page $\mathbf{2 5}$ for Fluid Temperature Limits.

| Sizes: | $2-1 / 2,3,4,5,6,8$ inch |
| :--- | :--- |
| Body: | ANSI B16.1 Iron 125LB Flange or 250LB Flange |
| Trim: | Linear: Bronze (2-1/2 thru 6) or <br>  <br> 300 Series Stainless Steel (2-1/2 thru 8) |
| Racking: | Long-Life Multi-Stack, EPDM Lip Packing, <br> (EPDM lip packing is not suitable for use with oils, <br> hydrocarbons, or acids.) <br> Guided Low-Friction TFE V-Ring, Spring Loaded Packing, |
|  | Adjustable Graphite Packing |

## 2932 3-Way Diverting/Mixing Valve

Designed as a diverting valve with one inlet and two outlets with ANSI Class II leakage rating. However, flow can be reversed for mixing if this port configuration is desirable. The difference between the upper port and lower port pressure must not exceed 50PSID. See Table on page $\mathbf{2 5}$ for Fluid Temperature Limits. (See piping note on page 11.)

| Sizes: | 2-1/2, 3, 4, $5,6,8$ inch |
| :--- | :--- | :--- |
| Body: | ANSI B16.1 Iron 125LB Flange or 250LB Flange |
| Trim: | Linear: Bronze or 300 Series Stainless Steel |

[^0] service conditions for alternate o-ring selection.

## LOAD SIZING CALCULATIONS

## Glossary of Terms

$\mathrm{t}=$ Time in Hours
$C p=$ Specific Heat of Liquid
$S=$ Specific Gravity of Fluid
W = Weight in Lbs.
$\Delta \mathrm{T}=$ Temperature Rise or Fall in ${ }^{\circ} \mathrm{F}$
$\mathrm{h}_{\mathrm{fg}}=$ Latent Heat of Steam

## Conversion Factors

1 Lb . Steam / Hr. $=1000$ BTU $/ \mathrm{Hr}$.
1 Cubic Meter $=264$ U.S. Gallons
1 Cubic Foot Water $=62.4$ Lbs.
$1 \mathrm{PSI}=\quad 2.04$ Inches of Mercury
$1 \mathrm{PSI}=\quad 2.3$ Feet of
Water
1 PSI = 27.7 Inches of Water
1 U.S. Gallon Water $=231$ Cubic Inches
1 U.S. Gallon Water $=8.33 \mathrm{Lbs}$.

## Heating Water with Steam

Quick Method
Lbs./Hr. $=\frac{\text { GPM }}{2} \times \Delta T$
Accurate Method

Lbs./Hr. $=\frac{\mathrm{GPM} \times 500 \times \Delta \mathrm{T}}{\mathrm{h}_{\mathrm{fg}}}$

## Heating or Cooling Water with Water

$\mathrm{GPM}_{1}=\mathrm{GPM}_{2} \times \frac{{ }^{\circ} \mathrm{F} \text { water }{ }_{2} \text { temp. rise or drop }}{{ }^{\circ} \mathrm{F} \text { water } \text { temp. rise or drop }}$

## Heating or Cooling Water

$$
\mathrm{GPM}=\frac{\mathrm{BTU} / \mathrm{Hr} .}{\left({ }^{\circ} \mathrm{F} \text { water temp. rise or drop }\right) \times 500}
$$

## Heating Oil with Steam

Lbs./Hr. $=\frac{\text { GPM }}{4} \times\left({ }^{\circ} \mathrm{F}\right.$ oil temp. rise $)$

## Heating Air with Water

GPM $=2.16 \times \frac{\text { CFM } \times \text { ( }{ }^{\circ} \mathrm{F} \text { air temp. rise) }}{1000 \times\left({ }^{\circ} \mathrm{F} \text { water temp. drop) }\right.}$

## Heating Liquids with Steam

$\mathrm{Lbs} . / \mathrm{Hr} .=\frac{\mathrm{GPM} \times 60 \times \mathrm{Cp} \times \mathrm{W}}{\mathrm{h}_{\mathrm{fg}}} \times \Delta \mathrm{T}$

## Heating Liquids in Steam Jacketed Kettles

Lbs./Hr. $=\frac{\text { Gallons } \times \mathrm{Cp} \times \mathrm{S} \times 8.33}{\mathrm{~h}_{\mathrm{fg}} \times \mathrm{t}} \times \Delta \mathrm{T}$

## General Liquid Heating

Lbs. $/ \mathrm{Hr} .=\frac{\mathrm{W} \times \mathrm{Cp}}{\mathrm{h}_{\mathrm{fg}} \times \mathrm{t}} \times \Delta \mathrm{T}$

## Heating Air with Steam

Lbs./Hr. $=\frac{\text { CFM }}{900} \times \Delta T$

## NOTES:

1) 2920 leakage rating is ANSI Class IV.
2) Inlet pressure exceed Body Pressure-Temperature Rating.
3) The $3-15$ and 1-17 columns of the table apply to valves with control signals coming directly from I/P transducers with matching ranges. The $0-30$ and $0-40$ columns apply to valves with a positioner or an I/P transducer of suitable range.
4) $N / A$ indicates that the air signal is not capable of providing any shut-off or it exceeds the actuator's maximum air pressure.

Maximum air pressure
DL49 \& 49XR...30PSIG
DL84 \& 84XR...30PSIG
DL115 \& 115XR...40PSIG
5) Do Not Use DL115 OR 115XR

Actuators on Valves With Bronze Trim.
6) See Actuators, Positioners, and Accessories section for explanation of spring ranges.

Shut-off values are for valves with TFE or EPDM packing.
For valves with graphite packing contact factory for shut-offs.

## NOTES:

1) 2923 leakage rating is ANSI Class IV.
2) Inlet pressure cannot exceed Body Pressure-Temperature Rating.
3) The 3-15 and 1-17 columns of the table apply to valves with control signals coming directly from I/P transducers with matching ranges. The 0-30 and 0-40 columns apply to valves with a positioner or an I/P transducer of suitable range.
4) $N / A$ indicates that the air signal is not capable of providing any shut-off or it exceeds the actuator's maximum air pressure.

Maximum air pressure
DL49 \& 49XR...30PSIG
DL84...30PSIG
DL115 \& 115XR...40PSIG
5) Do Not Use DL115 OR 115XR Actuators on Valves With Bronze Trim.
6) See Actuators, Positioners, and Accessories section for explanation of spring ranges.

## Shut-off values are for valves with TFE or EPDM packing. <br> For valves with graphite packing contact factory for shut-offs.

## NOTES:

1) 2930 Mixing Valves have two inlets and one outlet. Published shut-off values are with respect to worst case conditions with zero downstream pressure on the outlet port and zero upstream pressure on the opposing inlet port. Pneumatic Actuators used with the 2930 are direct acting. The upper port fails closed on loss of air pressure to the actuator.
2) 2930 leakage rating is ANSI Class IV.
3) Inlet pressure cannot exceed Body Pressure-Temperature Rating.
4) The 3-15 and 1-17 columns of the table apply to valves with control signals coming directly from I/P transducers with matching ranges. The $0-30$ and $0-40$ columns apply to valves with a positioner or an I/P transducer of suitable range.
5) $N / A$ indicates that the air signal is not capable of providing any shut-off or it exceeds the actuator's maximum air pressure.

Maximum air pressure
DL49...30PSIG
DL84 \& 84XR...30PSIG
DL115 \& 115XR...40PSIG
6) Do Not Use DL115 OR 115XR Actuators on Valves With Bronze Trim.
7) See Actuators, Positioners, and Accessories section for explanation of spring ranges.

## Shut-off values are for valves with TFE or EPDM packing. <br> For valves with graphite packing contact factory for shut-offs.

## NOTES:

1) Published shut-off values are for diverting applications. The values are worst case and based on the pressure difference between the inlet and the outlet that is closed. Consult the factory if the required shut-off exceeds the published value and the pressure at the inlet and both outlets is known. For proper operation in diverting applications, the pressure difference between both outlets must not exceed 50 psi. Consult the factory for shut-off values for 2932 mixing applications. Pneumatic Actuators used with the 2932 are direct acting. The upper port fails closed on loss of air pressure to the actuator.
2) 2932 leakage rating is ANSI Class II.
3) Inlet pressure cannot exceed Body Pressure-Temperature Rating.
4) The 3-15 and 1-17 columns of the table apply to valves with control signals coming directly from I/P transducers with matching ranges. The $0-30$ and $0-40$ columns apply to valves with a positioner or an I/P transducer of suitable range.
5) $\mathrm{N} / \mathrm{A}$ indicates that the air signal is not capable of providing any shut-off or it exceeds the actuator's maximum air pressure.

Maximum air pressure
DL49...30PSIG
DL84...30PSIG
DL115...40PSIG
6) See Actuators, Positioners, and Accessories section for explanation of spring ranges.

*PIPING NOTE: The 2932 is NOT compatible with an elbow directly connected or in close proximity to the common port without the use of a flow straighter. Otherwise a minimum of 10 diameters of straight pipe are required for the common port connection.

## HEAT/SOUND PRESSURE LEVELS GUIDELINES

## Fluid Temperature Limit Thresholds

The engineering data within our product specification will share information about MAX fluid temperature limits as if it is an absolute for any configurable valve assembly. It is not. The MAX fluid temperatures listed, sometimes as high as 800 Deg. F depending on the valve is only an absolute one for the valve body itself. It does not take into consideration the actuation or accessories. Actuators and accessories each have their own MAX ambient temperature limits that may be anywhere from 122 of to $250^{\circ} \mathrm{F}$ depending on the items for the electronics or softs goods these items contain. It is nearly impossible to correlate JUST

## fluid temperature to determine when any of these actuators or accessories will have their ambient exceeded.

```
THERE ARE SEVERAL FACTORS THAT INCLUDE BUT ARE NOT LIMITED TO:
```

- valve size
- actuator orientation
- room ambient temperature
- distance from the valve body to the components of interest
- bonnet style/size
- conducted heat versus radiated heat
- ventilation

With all of these variables it is a challenge to come up with some guidelines.
However, we have attempted to do that in the tables that follow on page 15 . Realize these are only guidelines.

## Actuator Mounting VS Insulating Blankets

When working with higher fluid temperatures thermal insulating blankets can dramatically reduce surface temperatures on pipes, valves and other fixtures in a fluid control system such that the ambient room temperatures in these environments are dramatically reduced as well. This is often required in for valve actuators and accessories to reliably survive when fluid temperatures rise well above the safe ambient temperatures of the devices. Radiant heat and convected heat are the major sources for damage to these actuators and accessories. When a valve actuator is mounted to the side of a valve there is still radiant heat but convected heat is mostly eliminated. For globe control valves, having the actuator mounted vertically above the valve is best for optimum valve packing life but will then suffer the most with both radiant and convected heat to deal with. Alternatives to blankets and the mounting orientation listed include longer yoke actuators and extension bonnets on valves. These put distance between the heat sources and the components you are trying to protect from heat.

## Choose the right blanket

## (1) คடロபSTIGபคRロ™

## vs THER

At Warren Controls our AcoustiGuard ${ }^{T \mathrm{~m}}$ \& ThermiGuard ${ }^{\mathrm{Tm}}$ blankets are nearly identical. In fact they have identical thermal properties. The AcoustiGuard ${ }^{\text {TM }}$ has an additional layer of high density barium sulfate vinyl reflector for sound reflection. Each blanket is specifically designed in a one or two piece design that is made to be easily removable for valve servicing. When used in conjunction with high temperature fluids, significant energy savings, lower surface \& ambient temperatures and a safer environment for employees are just some of the benefits.

Predicting Safe Fluid Temperatures for Actuators \& Accessories

## VERTICAL ABOVE PIPING

This is the recommended position for mounting as it is the best position to ensure the service life of the equipment; however this is where it will encounter the most heat and sound vibrations.

## 45º FROM VERTICAL ABOVE PIPING

## ON EITHER SIDE

You may mount in this position to try to reduce the heat in high temperature applications; however this will reduce the life of the packing.
Actuators mounted in any position other than vertical MUST be supported independent of the valve.

## $90^{\circ}$ TO PIPING HORIZONTAL ON EITHER SIDE

This is the worst possible position and creates great strain and limits the life of the internal components of the valve.

Actuators mounted in any position other than vertical MUST be supported independent of the valve.

The tables that follow on page 15 will identify temperature ranges, valve size ranges, actuator orientation and use of thermal blankets to determine what is required to get longevity out of your actuators and accessories.

## HEAT/SOUND PRESSURE LEVELS GUIDELINES

Whether you need to lower your mechanical room temperature, avoid getting burned, reduce harmful noise or save energy our blanket wraps are your solution!

AcoustiGuard ${ }^{\text {TM }}$ \& ThermiGuard $^{\text {TM }}$ are custom fit high quality insulation blanket systems pre-engineered to either reduce harmful noise, or save energy by retaining radiant heat. Both are designed to improve the surrounding work environment. While AcoustiGuard ${ }^{\text {tm }}$ is designed to act as a "sound attenuation" and thermal barrier, ThermiGuard ${ }^{\text {Tm }}$ is capable of withstanding weather conditions and chemical environments. Both are capable of withstanding maximum service temperatures of $450^{\circ} \mathrm{F}$ (AcoustiGuard ${ }^{\text {Tm }}$ \& ThermiGuard ${ }^{\text {Tm }}$ ) or up to $800^{\circ}$ F with the High Temperature option. Any piece will not exceed 40 pounds. AcoustiGuard ${ }^{\text {TM }}$ comes with 2 fastening options: Lacing Pins \& Metal "D" Ring Strap with Velcro Tab. In addition to these fastening options, ThermiGuard ${ }^{\text {Tm }}$ comes with 2 additional fastening options: Velcro Flaps \& Side Release Buckles. The AcoustiGuard ${ }^{\text {TM }} \&$ ThermiGuard $^{\text {Tm }}$ products are designed to be flexible and easier to install, easy to remove and reinstall, allowing quick access and easy equipment serviceability.

- EASY TO INSTALL \& REINSTALL
- CAN WITHSTAND UP TO $450^{\circ} \mathrm{F}$ OR $800^{\circ} \mathrm{F}$
- MULTIPLE FASTENING OPTIONS

## POSITIONERS

## Split Ranging with Positioners

Positioners are sometimes used to "Split-Range" two control valves in a parallel configuration within a piping scheme. This technique is used to obtain higher rangeability than could otherwise be achieved with a single control valve. Typically one smaller valve supplying $15 \%$ to $35 \%$ of total flow is mated with a larger valve supplying $65 \%$ to $85 \%$ of total flow.

The best-matched pair will each be providing similar rangeability for each respective flow contribution to the manifold. Calculated as maximum flow /minimum controllable flow, the smaller valve should not be attempting to control flow below $5 \%$ of stroke. Estimate Cv from Cv tables vs. stroke to calculate this.

The chosen positioners would then have a Low Range signal for the smaller valve and a High Range Signal for the larger valve. With this, a single control signal can be used and serially applied to each valve. At mid-signal range, the little valve is completely open while the larger valve is just starting to open. Controllability for wide process set point ranges is dramatically improved.

## VAC V200 Models:

VAC V200 Pneumatic

Models: 2FP_: Full Range Signal (3-15 PSIG)
2LP_: Low Range Signal (3-9 PSIG)
2HP_: High Range Signal (9-15 PSIG)
Options:
Ingress \& Corrosion
Protection:
Supply Pressure:
NEMA, 4X, IP66
20 to145 PSIG Max Not to Exceed
Actuator Rating
Linearity error: <0.7\% f.s.
Hysteresis: <0.4\% f.s.
Repeatability: <0.3\% f.s.
Weight:
3.2 lbs

## VAC V200 Electro-Pneumatic

Models: 2FE_: Full Range Signal ( $4-20 \mathrm{~mA}$ )
2LE_: Low Range Signal (4-12 mA)
2HE_: High Range Signal (12-20 mA)
Options:
2SPDT Limit Switches, 4-20 mA Feedback
Ingress \& Corrosion
Protection: NEMA, 4X, IP66
Supply Pressure: 20 to 145 PSIG Not to Exceed Actuator Rating
Linearity error: <1.0\% f.s.
Hysteresis: <0.6\% f.s.
Repeatability: <0.5\% f.s.
Weight: 3.8 lbs

## VAC V200 Electro-Pneumatic Intrinsically Safe

Models: 2FI_: Full Range Signal (4-20 mA)
2LI_: Low Range Signal (4-12 mA)
2HI_: High Range Signal (12-20 mA)
Ingress \& Corrosion
Protection: NEMA, 4X, IP66
Supply Pressure: 20 to 145 PSIG Not to Exceed Actuator Rating Linearity error: <1.0\% f.s.

Hysteresis: <0.6\% f.s.
Repeatability: <0.5\% f.s.
Weight: 3.8 lbs

## VAC V200 Electro-Pneumatic Explosion Proof

Models: 2FX_: Full Range Signal ( $4-20 \mathrm{~mA}$ )
2LX_: Low Range Signal (4-12 mA)
2HX_: High Range Signal (12-20 mA)
Ingress \& Corrosion
Protection: NEMA, 4X, IP66
Supply Pressure: 20 to 145 PSIG Not to Exceed Actuator Rating
Linearity error: <0.8\% f.s.
Hysteresis: <0.5\% f.s.
Repeatability: <0.4\% f.s. Weight: 5.3 lbs

## VAC V200 Electro-Pneumatic Fail Freeze *

Models: 2FF_: Full Range Signal ( $4-20 \mathrm{~mA}$ )
2LF_: Low Range Signal (4-12 mA)
2HF_: High Range Signal (12-20 mA)
Options: 2SPDT Limit Switches, 4-20 mA Feedback
Ingress \& Corrosion
Protection: NEMA, 4X, IP66
Supply Pressure: 20 to 100 PSIG Not to Exceed Actuator Rating
Linearity error: <1.2\% f.s.
Hysteresis: <0.9\% f.s.
Repeatability: <0.8\% f.s. Weight: 5.4 lbs

## D400 All Models:

Construction:
Aluminum Case with Electrostatic Dipping Varnish with Epoxy Resin Stove Hardened.
Ingress \& Corrosion
Protection:
IP65 / NEMA 4X
Action:
Supply Pressure:
Media:

Direct or Reverse
20 to 90PSIG Not to Exceed Actuator Rating
Clean Dry Oil Free Air acc.to DIN / ISO 8573-1
Pollution and Oil Content According to Class 3 (Purity: Max. Particle Size: $5 \mu \mathrm{~m}$, Max.
Particle Density: $5 \mathrm{mg} / \mathrm{m} 3$; Oil Content: Max.
Concentration: $1 \mathrm{mg} / \mathrm{m3}$; Pressure Dew Point:
10, K Below Operating Temperature

Output Flow Capacity: 2.3 SCFM at 20 PSIG, 6.0 SCFM at 90 PSIG

Air Consumption: $\quad<0.015$ SCFM (Independent of Supply Pressure)
Air Connections: $\quad 1 / 4-18$ NPT
Electrical Connections: 1/2-14 NPT
Gauges: Supply, Output
Ambient Temperature: -40 to $185^{\circ} \mathrm{F}$
Mounting: Yoke Mounted
Available as Specials: (Contact Factory for Details and Available Models)
Fail Freeze Function
Safety Integrity Level SIL2
ATEX, GOST, IECEx Approvals
Shutdown Module

## OPTIONS:

F) $\mathbf{4 - 2 0} \mathrm{mA}$ Feedback Module

Range $4-20 \mathrm{~mA}$ (Configurable)TwoWire circuitry, Power Supply 24VDC
NOTE: For 4-20mA w/HART Models ONLY
K) Digital Position Feedback Module

Two Switches For Digital Position Feedback (Position Adjustable Within The Range Of 0 ... 100\%, Ranges Cannot Overlap)
NOTE: For 4-20mA w/HART Models ONLY
L) 24VDC/AC Micro-switches

Two Micro-switches For Independent Position Signaling. Switching Points Adjustable Between 0 ... 100\%
NOTE: For Explosion Proof Models ONLY
P) Proximity Switches NC

Two Proximity Switches For Independent Position Signaling. Switching Points Adjustable Between 0 ... 100\%
Switch Type SJ2-SN (NC)

* For 4-20mA w/HART Models Only
\# For Explosion Proof Models ONLY

## ACTUATORS, POSITIONERS, \& ACCESSORIES

Locations: NEMA 1, 2, 3, 3R, 3S, 4, 4X, 6, 7, 9, 12, 13
Approvals: \& Ratings:
UL: Class I, Div. 1 \& 2, Groups B, C, D; Class II, Div. 1 \& 2, Groups E, F, \& G
CSA: Class I, Div. 1 \& 2, Groups A, B, C, D; Class II, Div. 1 \& 2, Groups E, F, \& G
Construction: Aluminum Housing, Hard Anodized
Electrical Connection: Screw Terminal
Conduit Connection: 3/4 NPT
Mounting: Yoke Mounted

Locations:
Construction:
Ranges:
Supply Pressure:

Flow Capacity:
Air Consumption: 0.05 SCFM Midrange Typical
Ambient Temperature: -20 to $140^{\circ} \mathrm{F}$

## Type 550X

Locations:
Construction:

Ranges:
Supply Pressure:

Flow Capacity: $\quad 12$ SCFM at 100 PSIG
Air Consumption: 6.0 SCFH Midrange Typical
Ambient Temperature: -20 to $150^{\circ} \mathrm{F}$

Type 950X

| Locations: | NEMA 4X (IP65), Explosion proof |
| :--- | :--- |
| Construction: | Chromate-treated Aluminum with Epoxy Paint <br> Ranges: |
| 3-15 PSI |  |

Models: Type 300, Type 350SS
Output Ranges: Type 300, 0-30, 0-60 PSIG
Type 350SS, 0-100 PSIG
Supply Pressure: Type 300, 250 PSIG Maximum Type 350SS, 290 PSIG Maximum
Construction: Type 300, Die-Cast Aluminum with Irridite and Baked Epoxy Paint Type 350SS, 316 Stainless Steel
Gauge: Type 300, Output, Housing Steel Painted Type 350SS,Output, Housing Stainless Steel 1/4 NPT
Air Connections
Type 300, 5 micron (D400 Positioners Require 5 micron Filter). Type 350SS, 25 micron
Mounting: Chamber Mounted

## Solenoids

Models:
8320G184, EF8320G184,
8320G202, EF8320G202

Construction:
(EF)8320G184, 3-Way Brass
(EF)8320G202, 3-Way Stainless Steel
Locations:
83206G184 \& 8320G202, Watertight,
Types 1, 2, 3, 3S, 4\& 4X
EF8320G184 \& EF8320G202, Explosion proof and Watertight, Types 3, 3S, 4, 4X 6, 6P, 7 \& 9
Supply:
120 VAC (All), 24Vdc (8320G184)
Ambient Temperature: +32 to $125^{\circ} \mathrm{F}$
Air Connections: $\quad 1 / 4$ NPT
Electrical Connection: 1/2 NPT, Pigtail Leads
Approvals: CSA, UL, CE
Mounting: Chamber Mounted

## Air Tubing

| Standard: | Copper |
| :--- | :--- |
| Optional: | Stainless Steel |
